

YELLOW FEVER – COUNTRY LIST VACCINATION RECOMMENDATIONS and COUNTRIES' ENTRY REQUIREMENTS Version: 25 January 2025	
General Information	<ul style="list-style-type: none"> Yellow fever (YF) vaccination may only be carried out by vaccination centres or specialists authorised by the Federal Office of Public Health (FOPH). You can find specialists and centres that carry out YF vaccination on LINK. In 2016, WHO changed their recommendation from YF booster doses every 10 years to a single dose, which is considered to confer life-long protection. However, this decision was based on limited data and mainly from endemic populations, potentially exposed to natural boosters (through contact with infected mosquitos), which does not apply to travellers from non-endemic regions. In addition, it is known that a small minority of vaccinated persons do not develop neutralizing antibodies after a single dose of the YF vaccine. As several experts have raised concerns about the WHO single dose strategy, the Swiss Expert Committee for Travel Medicine recommends a single booster dose ≥10 years (max. 2 doses per life-time) in immunocompetent persons after primovaccination before considering life-long immunity (see SOP YF vaccination). Different YF recommendations apply to persons with immunodeficiency (drug-induced, acquired, congenital), HIV-infected persons, as well as to persons who received the initial vaccination during pregnancy or at the age of <2 years or who received a stem cell transplant after the initial vaccination or who work with yellow fever virus in the course of their laboratory activities (see SOP YF vaccination).
WHO recommendation by country	<p>The WHO recommendation for YF vaccination by country were taken from the document of WHO, see LINK. The country-specific YF vaccination recommendation of WHO can be also found on the respective country pages of www.healthytravel.ch.</p> <ul style="list-style-type: none"> Vaccination recommended: there is a risk of yellow fever in the country Generally not recommended: There is a low, potential risk of yellow fever in these regions countries. A yellow fever vaccination is only recommended for persons who are <ul style="list-style-type: none"> subsequently plan to cross the border into a country with entry regulations in the case of increased exposure to yellow fever (e.g. long-term stay, inability to provide effective mosquito protection). Consideration for vaccination should include exposure risk, entry requirements, and individual risk factors (e.g., age, immunodeficiency). Not recommended: A yellow fever vaccination is not recommended (no risk of yellow fever). <p>Of note: Countries with WHO recommendation "Vaccination recommended" and "Vaccination generally not recommended" are yellow fever endemic countries and must be taken into account for country-specific entry regulations.</p>
Country requirement at entry	<ul style="list-style-type: none"> The country-specific entry requirements regarding yellow fever vaccination are listed according to text published in the 'Travel Information Manual' of the 'International Air Transport Association' (IATA). All country-specific entry requirements can be also found on the respective country pages of www.healthytravel.ch. In case the country concerned is not listed at the IATA document, the countries' entry requirement was taken from WHO or CDC. <p>The countries' entry requirements are listed as follows:</p> <ol style="list-style-type: none"> as abbreviations (T1, T2, obl, obl*, none, explanation see below) in an extra column next to the s describing the specific entry requirements in detail of the respective country including all possible exemptions.
obl	Vaccination against yellow fever is required upon entry, except for airport transits
obl*	Vaccination against yellow fever is required upon entry, including for airport transits
T1	<p>Vaccination against yellow fever is required if arriving within 6 days after leaving or transiting countries with risk of yellow fever transmission.</p> <p>Exempt from yellow fever vaccination:</p> <ul style="list-style-type: none"> Passengers transiting [the entering country] if not leaving the transit area Passengers transiting countries with risk of yellow fever transmission if not leaving the transit area
T2	<p>Vaccination against yellow fever is required if arriving within 6 days after leaving or transiting countries with risk of yellow fever transmission (including airport transit in yellow fever endemic countries)</p> <p>Exempt from yellow fever vaccination:</p> <ul style="list-style-type: none"> Passengers transiting [the entering country] if not leaving the transit area

Rep.), Cote d'Ivoire, Eritrea, Ethiopia, Gambia, Ghana, Guinea, Guinea-Bissau, Kenya, Mali, Mauritania, Niger, Nigeria, Rwanda, Senegal, South Sudan, Sudan, Tanzania, Togo and Uganda must have a vaccination for meningitis. The date of vaccination should be at least 10 days from the date of arrival in Saudi Arabia. This does not apply to passengers younger than 1 year. Validation of meningitis vaccines: according to the Ministry of Health, Saudi Arabia, a maximum validity period of 5 years is recognised for the conjugate vaccine, and 3 years for the polysaccharide vaccine. The vaccine must be clearly documented in the vaccination card ('International Certificate for Vaccination'). If you are planning a pilgrimage, please also note the information sheet "Pilgrimages" at www.healthytravel.ch.
